Lossdog Monthly Trade Recap

OCTOBER 2026

[First name], here's your October.

We went through every trade you made this month and pulled out how you got in, how you managed, and how you got out.

> YOUR MONTH IN ONE LINE
>
> **You get paid upfront, then you keep moving the trade instead of closing it.**

October at a glance

21 trading days you were active	**26** trades you opened and closed this month
3 to 1 times you adjusted a trade for every time you closed one	**1 in 4** of your trades happened before the market opened

WHAT YOU TRADED

- 🟨 Options on stocks · half
- 🟨 Futures · a third
- ■ Options on oil, gold, bonds and more · the rest

How you traded

GETTING IN

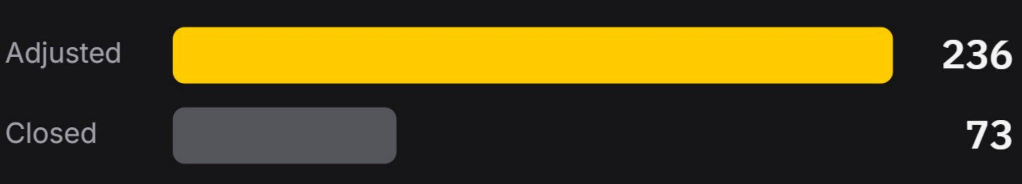
$156 what you usually collected upfront on a single contract

Early in October you picked end dates 5 to 6 weeks away. After Oct 20 you started adding trades that ended in 1 to 4 days, including a long run of HOOD trades on Oct 27.

You built in pieces. On HOOD, BA, SLV and SPY you made the same trade several times over a day or a few days.

Most of your trades went in when option prices were average or low. Only NFLX and WELL went in when prices were high.

MANAGING



When a stock moved hard one way, you usually slid the other half of the trade closer to the price, a little at a time, and collected more cash each time.

●●●●○ About 4 out of 5 of your adjustments put more cash in your pocket.

The rest came on big moves in AMD, DELL, META, gold and oil, where you paid a little to give the trade more room.

About 3 weeks before a trade ended, you usually pushed it out another month.

GETTING OUT

1-2 days your fastest winners lasted (NFLX, IBM, META)

Almost nothing rode to the last day. Most of your trades closed with 3 to 6 weeks still left on the clock.

When a trade went against you, sometimes you just closed it: your bond trades during the October rally, a CBRS trade, and an SPY trade you opened and closed the same day.

How it turned out

TRADES YOU OPENED AND CLOSED IN OCTOBER

●●●●●●●●●●●●●●●●●
●●○○○○○○○

+$124
net, after $[FEES] in fees

19 made money, 7 lost

Your winners usually kept a quarter to half of the cash you collected upfront. Your biggest loss, a CBRS trade, cost you about 1.7 times what you took in.

STILL OPEN GOING INTO NOVEMBER

Your biggest trades aren't counted above because they're still open. These are the ones you worked the most, each adjusted 16 to 22 times in October:

`/CL oil` `AMD` `INTC` `MSFT` `DELL` `AAPL`

MSFT, AAPL and AMD were pushed out from November to December in the last week of the month.

What changed this month

OCT 4 · OCT 20 · OCT 27

Trades ending 5 to 6 weeks out | Adds 1 to 4 day trades

After Oct 20, more of your trades ended within days instead of weeks. We'll show you next month whether that stuck.

This isn't your account statement. If anything here differs from your statement, your statement is correct.

How we counted. Results include only trades opened and closed in October. Trades opened earlier, and trades still open, are left out. Trade types are sorted automatically and may be wrong; tell us if something looks off.

This recap describes your past trades. It isn't a recommendation to buy or sell anything. Options and futures carry real risk and aren't right for everyone.
